SUMMARY

Senior Infrastructure Engineer with 13+ years of experience supporting and automating large-scale Windows infrastructure environments. Currently serving as the US regional lead for Windows server operations at a global financial institution, focused on improving reliability, consistency, and operational efficiency across enterprise systems.

Strong background in Active Directory, Azure, Citrix, and infrastructure automation, with a track record of identifying operational gaps and building scalable solutions that reduce manual effort and improve platform stability.

PROFESSIONAL EXPERIENCE

Senior Windows Engineer | *Nomura*

Nov 2021 – Present

- Built and implemented a global automation initiative across 7,000+ Windows servers to proactively identify and remove non-essential files, reducing recurring disk space incidents and improving patching stability. Designed execution model using local system context to reduce centralized service account dependency and limit potential blast radius in the event of compromise.
- Designed a standardized hardware monitoring solution using HP iLO and IML logs across distributed servers, leveraging read-only monitoring accounts to enable automated detection of hardware events and ServiceNow ticket creation, improving incident response consistency and reducing manual effort.
- Developed PowerShell-based Citrix operational reporting automation providing daily health visibility (controller status, host maintenance state, session activity, uptime), improving proactive detection of infrastructure issues for L2 support teams.
- Refactored and stabilized a failed production Active Directory audit automation system by modularizing legacy PowerShell logic, restoring reliability and taking ownership of ongoing operational support and enhancements.
- Created PowerShell automation utilities to streamline repetitive Active Directory and infrastructure operations supporting enterprise identity and access services for 20,000+ users.

IT Administrator | *Center for All Abilities (ongoing / part-time)*

Mar 2015 – Present

- Provide ongoing pro bono IT support for a nonprofit serving individuals with autism and developmental disabilities, managing Google Workspace, and cloud infrastructure for staff and volunteers.
- Built AWS EC2 QuickBooks Desktop replacement with secure remote access, S3 backups, and Lambda/Apps Script automation for reporting and admin workflows.
- Modernized Excel-based financial logging system by migrating to Google Sheets and building Google Apps Script automation for CSV ingestion, reporting, and reconciliation workflows.

Infrastructure Consultant | *MoleQ USA Inc. (freelance, concurrent with MSC)*

Sept 2020 – Jan 2021

- Designed and implemented an on-premises infrastructure for a SMB, including Active Directory, virtualization, network segmentation, secure WiFi, and backup/DR strategy.
- Developed a PowerShell-based user provisioning automation tool that standardized account creation and group assignment, enabling non-technical staff to handle onboarding consistently.

- Created infrastructure documentation and operational runbooks covering system architecture, network topology, and administrative procedures, improving maintainability and reducing reliance on external support.

Infrastructure Systems Engineer | *MSC*

Jul 2018 – Nov 2021

- Led Citrix environment standardization initiative, migrating machine catalogs, delivery groups, application publishing, and access controls into a unified platform to ensure consistent configuration across environments.
- Engineered automation for Azure infrastructure operations, including VM rebuild workflows with preserved compute/storage/network state, reducing manual remediation effort and improving deployment consistency.
- Built a PowerShell-based interactive automation tool supporting firmwide MSSQL migration to Azure UltraShared Disks, providing environmental validation, guided user input, and automated disk provisioning and attachment to Windows virtual machines.
- Developed PowerShell automation to identify orphaned Azure resources across a 1,000+ server environment, enabling governance validation and remediation workflows to reduce infrastructure waste and improve cloud resource hygiene.

Systems Administrator | *MoleQ USA Inc.*

Apr 2013 – Jul 2018

- Technical lead supporting infrastructure across 100+ business clients, managing Active Directory, virtualization, Group Policy, and network environments.
- Developed PowerShell and SQL automation to improve operational visibility, monitor critical nightly processes, and reduce manual reporting effort, enabling faster issue detection and resolution.

TECHNICAL SKILLS

OS & Directory: Windows Server (2008–Current), Active Directory, Microsoft Entra ID, GPO, DNS, DHCP, DFS

Cloud: Azure, AWS, Azure Arc

Virtualization: VMware, Hyper-V

End User Computing: Citrix, RDS

Automation: PowerShell, Python, Ansible, Terraform, use of AI-assisted tools (Copilot, ChatGPT, Claude) to support scripting, troubleshooting, and documentation

Monitoring: Azure Monitor, Log Analytics, Splunk, SCOM

Storage & Backup: Veeam, Backup Exec

CERTIFICATIONS

- Microsoft Certified: Azure Solutions Architect Expert
- Microsoft Certified: Identity and Access Administrator Associate
- Microsoft Certified: Security, Compliance, and Identity Fundamentals
- AWS Certified SysOps Administrator
- Citrix Certified Professional – CCP-V

EDUCATION

B.S. Cloud Computing | Western Governors University — Salt Lake City, Utah
